November 2018 Program

Amphibians and Reptiles of Long Island

Wednesday, November 14 at 7 PM

Cold Spring Harbor Library - 95 Shore Rd. Cold Spring Harbor

Amphibians and Reptiles of Long Island: Did you know that Long Island is home to 17 amphibian and 30 reptile species? Dr. Russell Burke will describe the strange biogeography of our local amphibians and reptiles, including those we've lost and the surprising number that we've gained. He'll share his fascinating findings and research including the ecology, evolution, and conservation biology of local turtles, lizards, and salamanders. We'll talk about rattlesnakes and tiger salamanders, terrapins and toads, and much more!

Dr. Burke is a professor at Hofstra University and studies several species: diamondback terrapins at nearby Jamaica Bay, wood turtles in northern New Jersey, and wall lizards on Long Island. The lizards in particular are great models for studies of invasive species. His courses at Hofstra include Ecology, Evolution, Behavior, Conservation Biology and Herpetology.

Before our program at 6pm, we will be hosting a photography fundraising event by Huntington HS student, Alexa Helburn. Your participation will be supporting an aspiring new photographer and HOBAS at the same time. Thank you for your support!

This event is free and open to the public

6pm photography fundraiser & refreshments - 7:30 speaker program
